Do recent moves in the construction industry towards collaborative working and other new procurement procedures really make good business sense? Procurement in the Construction Industry is the result of research into this question and it includes the first rigorous categorizing of the differences between procurement methods currently in use. In the process of carrying out this research, the team has produced a comprehensive study of procurement methods which looks in detail at the relative benefits and costs of different ways of working, with sometimes surprising results. As such, it is not only a valuable guide

for practitioners on the complexities of the procurement process, but also an outline of the relevance of economic theory to the construction sector.

This CIGRE Green Book provides the entire know-how about switches in a high voltage system. The switching equipment includes circuit breakers, vacuum interrupters, disconnecting switches, and earthing switches used in AC & DC transmission and distribution systems. The Green book describes different switching equipments and their roles in the power systems. It explains the fundamental switching behaviors in power systems targeted for practitioners and students and joining electrical industries. The Green book also covers fundamental specific subjects including DC circuit breakers, controlled switching, fault current limiting devices and future technologies. Like all Green books, this book covers the cumulative understanding of numerous experts in the CIGRE study committee. It offers the approved and outstanding practical knowledge of CIGRE Study committee A3 and was collected by Dr. Hiroki Ito.

As an industrial process, construction is unique. The procurement processes used to achieve the successful completion of built assets requires a different approach to that adopted in most other industries, due to the design of buildings being bespoke and the sites being geographically varied. The procurement process is central to the success of any construction project and many of the problems which impact construction projects can be traced back to the procurement phase, so a good understanding of the methods of procurement, the development of a procurement strategy and the influence it has on project success is essential for all those working in the industry. Much has changed in the global construction industry since publication of the second edition of Building Procurement, for example the increase in debt burden of many major economies, widespread adoption of Building Information Modelling (BIM) Technology in the industry and the United Kingdom's exit from the European Union. This new edition has been rewritten to take account of these significant developments, but at its core it continues to provide a critical examination and review of current procurement practices in the UK, continental Europe (including EU procurement procedures), China, Middle East and Sub-Saharan Africa and the USA. It retains its original strong emphasis on the need for clients to establish achievable objectives which reflect the project business case and focuses on development of suitable strategies and management structures to meet those objectives in the current construction climate. Building Procurement will be essential reading for senior undergraduate and postgraduate students of construction management and practitioners working in all areas of construction management.

Project management – to many people, it sounds like a project manager who is constantly pushing his team members to work and reporting to stakeholders overly optimistic news. That 's not the truth and in fact, PMBOK (Project Management Body of Knowledge) by PMI (Project Management Institute) has done a great job in defining the key people, knowledge areas and phases of a project. Project management is a very complex job that involves a lot of responsibilities. They have to keep the team as one and purposefully directed, they also have to keep their stakeholders updated, and have to be quick on their feet to think of a way out in times of distress. For a project to be declared successful and provide satisfying results to stakeholders, the basis of project management here will help you get started with what to do.
