the original books by Roy Chudley has been retained, avoiding lengthy descriptive passages and leaving the original diagrams to illustrate best practice and techniques. This book covers the basic elements of substructure (site works, setting out and foundations) and superstructure (flooring and roofs, simple finishes, fittings and fixtures) as well as basic services such as water, gas electricity and drainage. It also considers low-rise framed industrial and commercial buildings.

The four volumes of Construction Technology provide a comprehensive guide to building technology from simple domestic single storey construction using traditional techniques to more complex multi-storey construction using more modern industrialised techniques. Each volume describes the technology concisely and is well illustrated with the author's own illustrations. The series provides a basic knowledge of all building activities from basic methods of construction in the early volumes through to more complex topics such as site planning, curtain walling and builders plant in later volumes. The series concentrates on the technology and avoids lengthy descriptive passages, leaving the description to the author's very detailed drawings. Volume 2 completes the coverage of conventional methods and materials of construction. As with volume 1, it deals with the construction of a small structure such as a bungalow or two-storey house. The book introduces more complex topics than are covered in volume 1. It deals with site and temporary works, e.g. simple excavations and scaffolding; substructure topics such as retaining walls and reinforce concrete foundations; simple framed buildings; floors and roof structures such as precast concrete floors and asphalt and lead-covered roofs; finishes and fittings such as simple concrete stairs; insulation; and services such as electrical and gas installations.

Construction Technology provides a comprehensive introduction to every aspect of the technology of domestic low-rise construction. It includes elements of commercial construction, and the principal associated legislation. Based on "Construction Technology Volumes 1 and 2", this combined new edition has been updated in line with contemporary legislation and practice. In addition a substantial amount of new material has been included, in order to cover recent developments in technology affecting the construction industry. This book covers the basic elements of substructure (site works, setting.

Building Construction Handbook is an authoritative reference for all students and professionals. It is full of detailed drawings that clearly illustrate the construction of building elements. The principles and processes of construction are explained with the concepts of design included where appropriate. Extensive coverage of building construction practice and techniques, representing both traditional procedures and modern developments, are also included to provide the most comprehensive and easy to understand guide to building construction. The new edition has been reviewed and updated and includes additional material on energy conservation, sustainable construction, environmental and green building issues. Further details of fire protection to elements of construction are provided. Building Construction Handbook is an essential text for undergraduate and vocational students on a wide range of courses including NVQ and BTEC National, through Higher National Certificate and Diploma to Foundation and three-year Degree level. It is also a useful practice reference for building designers, contractors and others engaged in the construction industry. It is ideal for students on all construction courses. The topics are presented concisely in plain language and with clear drawings. It incorporates recent revisions to Building and Construction Regulations.
