The languages covered in the tests are English (1st language) and Hindi (2nd language).

The population processes in which we all participate are compared, contrasted, and synthesized into understandable trends in the latest edition of this widely acclaimed text. The authors' cogent analysis encompasses demographic milestones like surpassing the seven billion population mark and becoming a majority urban population for the first time in human history, as well as the repercussions of a global financial crisis and the implications of two important ongoing trends: aging and fertility decline. New data, examples, and discussions of emerging demographic issues are incorporated throughout the value-priced Fourth Edition, along with graphics that highlight trends and facilitate comparisons among world regions. This pedagogically rich volume also includes propositions for debate and end-of-chapter exercises that allow readers to become comfortable with the quantitative tools that demographers use to measure and describe populations. Moreover, users will learn about some of the people behind the research that informs this text in a new feature called Careers in Demography.

"David Edgar, like Balzac, seems to be the secretary for our times" (Guardian) Our Own People: "A courageous and intelligent discussion of race and industrial relations" (City Limits); Teendreams (written with Susan Todd of Monstrous Regiment theatre company) is about the failed revolutionary dreams of a set of teenagers. Maydays compares the phenomenon of post-war social rebellion from Western and Eastern perspectives; That Summer is an "elegantly tangential treatment of the 1984 miners' strike" (Plays and Players) "Edgar never lets his drama simplify into ideological diagram...This elegant, humane play keeps its emphasis on the...results that can ensue when diverse lives briefly brush against each other." (Independent)

Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR-LEARNING to Realize Education's Promise-is the first ever devoted entirely to education. And the time is right: education has long been critical to human welfare, but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity, but fulfilling its potential requires better policies-both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those countries aspire to. And too often these shortcomings are hidden-so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.

An authorised reissue of the long out of print classic textbook, Advanced Calculus by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

"The Cambridge Guide to Second Language Assessment aims to present in one volume an up-to-date guide to the central areas of assessing the second language performance of English by speakers of other languages. This volume provides snapshots of significant issues and trends that have shaped language assessment in the past and highlights the current state of our understanding of these issues"--
