A must-have for Finals success! Revise and prepare for Finals with question papers and comprehensive answers that test your knowledge and help you learn This question book covers all medical specialties, as well as surgical specialties, paediatrics, orthopaedics, and obstetrics and gynaecology, to provide a fully comprehensive revision and study tool for Finals. Complete SAQs for Medical Finals comprises at least ten questions in each section, in the style seen and used in SAQ Finals papers. Short case scenarios set the scene, from which questions are then taken, and each question is fully explained to help understanding and learning. Featuring two complete practice papers, and written by recently graduated Foundation doctors, this is essential for any medical student preparing for Finals to test understanding, identify weak areas, consolidate knowledge, and hone decision-making skills.

This volume rethinks the work of Jacques Ellul (1912-1994) on the centenary of his birth, by presenting an overview of the current debates based on Ellul's insights. As one of the most significant twentieth-century thinkers about technology, Ellul was among the first thinkers to realize the importance of topics such as globalization, terrorism, communication technologies and ecology, and study them from a technological perspective. The book is divided into three sections. The first discusses Ellul ' s diagnosis of modern society, and addresses the reception of his work on the technological society, the notion of efficiency, the process of symbolization/de-symbolization, and ecology. The second analyzes communicational and cultural problems, as well as threats and trends in early twenty-first century societies. Many of the issues Ellul saw as crucial – such as energy, propaganda, applied life sciences and communication – continue to be so. In fact they have grown exponentially, on a global scale, producing new forms of risk. Essays in the final section examine the duality of reason and revelation. They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge, which is to say, on the one hand, the experience of the human being as contained in the rationalist, sociological and philosophical traditions. On the other hand there are the transcendent roots of human existence, as well as " revealed knowledge, " in the mystical and religious traditions. The meeting of these two traditions enables us to look at Ellul ' s work as a whole, but above all it opens up a space for examining religious life in the technological society.

Known for her well-reasoned and passionately held beliefs about architecture, Ada Louise Huxtable has captivated readers across the country for decades, in the process becoming one of the best known critics in the United States. Her brilliance over so many years is unmatched, and her range has always been vast—from a plea to save a particular architectural treasure to an ongoing discussion about whether modern architecture is dead. Her keen eye and vivid writing have reinforced to readers how important architecture is and why it continues to be both controversial and fascinating. Since so much of her writing has been in newspapers, it has quickly become unavailable to her many fans. On Architecture will bring together her best work from the New York Times, New York Review of Books, her more recent essays in the Wall Street Journal, and her various books. She is personally selecting and organizing the pieces into sections like "Art and Culture" and "The Art of Architecture," and is revising them as needed to bring them up to date. Whether you love modern architecture or desire a return to Beaux Arts design, this book will give you insight into the mind and heart of a critic who has artfully brought the discussion of architecture, architects and our environment to readers for five decades.

Mightier Than the Sword UK is proud to present this second volume of work in aid of the British Heart Foundation. Featuring some poems and short stories by international best selling author, C.S. Woolley. The British Heart Foundation are the UK's heart charity and the largest independent funder of cardiovascular research. Coronary heart disease is the UK's single biggest killer but they are leading the fight against it. Their pioneering research has helped to transform the lives of people living with heart and circulatory conditions. Founded in 1961 by a group of medical professionals wanting to fund extra research into the causes, diagnosis, treatment and prevention of heart and circulatory disease. Their work has been central to the discoveries of vital treatments that are helping to change the face of the UK's fight against heart disease. Their vision is a world where people don't die prematurely from heart disease. After half a century of extraordinary scientific and societal progress they have helped to transform the landscape of heart disease. Their research is powered by your support. Every pound raised, every minute of your time and every donation to their shops will help make a massive difference to people's lives. At least 1 from the sale of every book will be donated directly to the British Heart Foundation.*

In Teaching English Language Learners through Technology, the authors explore the use of computers/technology as a pedagogical tool to aid in the appropriate instruction of ELLs across all content areas. The special focus of this book is on the informed use of various technologies and software programs that can specifically aid ELLs. Strategies are also provided for varying levels of access—whether teachers teach in a one computer classroom, have access to multiple computers, or have the ability to go into a computer lab at their school. A fully annotated list of web and print resources completes the volume, making this a valuable reference to help teachers harness the power of computer-assisted technologies in meeting the challenges of including all learners in effective instruction.

"This book isn't just another introduction to use cases. The authors have used their wealth of experience to produce an excellent and insightful collection of detailed examples, explanations, and advice on how to work with use cases." –Maria Ericsson The toughest challenge in building a software system that meets the needs of your audience lies in clearly understanding the problems that the system must solve. Advanced Use Case Modeling presents a framework for discovering, identifying, and modeling the problem that the software system will ultimately solve. Software developers often employ use cases to specify what should be performed by the system they're constructing. Although use case-driven analysis, design, and testing of software systems has become increasingly popular, little has been written on the role of use cases in the complete software cycle. This book fills that need by describing how to create use case models for complex software development projects, using practical examples to explain conceptual information. The authors extend the work of software visionary Ivar Jacobson, using the Unified Modeling Language (UML) as the notation to describe the book's models. Aimed primarily at software professionals, Advanced Use Case Modeling also includes information that relates use case technique to business processes. This book presents a process for creating and maintaining use case models in a framework that can be fully customized for your organization. The authors, pioneers in the application of use cases in software development, bring their extensive experience to cover topics such as: A process model for applying a use case model How to keep your use case modeling effort on track Tips and pitfalls in use case modeling How to organize your use case model for large-system development Similarities between Advanced Use Case Modeling and the Rational Unified Process framework Effect of use cases on user interface design Guidelines for quality use case modeling
