The principal goal of our materials and surface engineering research is to develop fundamental understanding of the physical processes and interactive mechanisms in materials that affect the performance of engineering systems, and to research and solve next-generation tribological design issues, thus enabling surface interactions to occur with minimal energy loss and impact on the environment.

~~Materials and Surface Engineering | Engineering ...~~

Surface engineering is the sub-discipline of materials science which deals with the surface of solid matter. It has applications to chemistry, mechanical engineering, and electrical engineering. Solids are composed of a bulk material covered by a surface. The surface which bounds the bulk material is called the Surface phase. It acts as an interface to the surrounding environment. The bulk material in a solid is called the Bulk phase. The surface phase of a solid interacts with the surrounding e
