Neuroscientist V.S.  
Ramachandran is  
internationally  
renowned for  
uncovering answers to

the deep and quirky questions of human nature that few scientists have dared to address.

His bold insights about the brain are matched only by the stunning simplicity of his experiments -- using such low-tech tools as cotton swabs, glasses of water and dime-store mirrors. In *Phantoms in the Brain*, Dr.

Ramachandran recounts how his work with patients who have bizarre neurological disorders has shed new light on the deep architecture of the brain, and what these findings tell us about who we are, how we construct our body image, why we laugh or become depressed, why we may believe in God, how we

make decisions, deceive ourselves and dream, perhaps even why we're so clever at philosophy, music and art. Some of his most notable cases: A woman paralyzed on the left side of her body who believes she is lifting a tray of drinks with both hands offers a unique opportunity to test Freud's theory of denial. A man who

insists he is talking with  
God challenges us to  
ask: Could we be  
"wired" for religious  
experience? A woman  
who hallucinates  
cartoon characters  
illustrates how, in a  
sense, we are all  
hallucinating, all the  
time. Dr.  
Ramachandran's  
inspired medical  
detective work pushes

the boundaries of  
medicine's last great  
frontier -- the human  
mind -- yielding new  
and provocative insights  
into the "big questions"  
about consciousness and  
the self.

John, aged sixty,  
suffered a stroke and  
recovered fully, except  
in one respect: although  
he can see perfectly, he

can no longer recognise faces, even his own reflection in a mirror.

Whenever Francesca touches a particular texture, she experiences a vivid emotion: denim = extreme sadness; wax = embarrassment; orange peel = shock.

Jimmie, whose left arm was recently amputated, can still feel it - and it's itchy. Our brains are the

most enchanting and complex things in the known universe - but what happens when they go wrong? Dr V. S. Ramachandran, 'the Sherlock Holmes of brain science' and one of the world's leading neuroscientists, has spent a lifetime working with patients who suffer from rare and baffling brain conditions. In The

Tell-Tale Brain, he tells their stories, and explores what they reveal about the greatest mystery of them all: how our minds work, and what makes each of us so uniquely human.

Includes the institute's Proceedings.

An astonishing new scientific discovery called neuroplasticity is overthrowing the centuries-old notion that the adult human brain is fixed and unchanging. It is, instead, able to change its own structure and function, even into old age. Psychiatrist and researcher Norman

Doidge, MD, travelled around the United States to meet the brilliant scientists championing neuroplasticity, and the people whose lives they've transformed - people whose mental limitations or brain damage were previously seen as unalterable, and whose conditions had long been dismissed as hopeless. We see a

woman born with half a brain that rewired itself to work as a whole; a woman labelled retarded who cured her deficits with brain exercises and now cures those of others; blind people who learn to see; learning disorders cured; IQs raised; ageing brains rejuvenated; stroke patients recovering their faculties; children with

cerebral palsy learning to move more gracefully; entrenched depression and anxiety disappearing; and lifelong character traits changed. Doidge takes us onto terrain that might seem fantastic. We learn that our thoughts can switch our genes on and off, altering our brain anatomy. We learn how

people of average intelligence can, with brain exercises, improve their cognition and perception, develop muscle strength, or learn to play a musical instrument - simply by imagining doing so. Using personal stories from the heart of this neuroplasticity revolution, Dr Doidge has written an
