Takeoff Advisor needs to know only a few basic flight characteristics of your plane such as climb and glide performance as well as the altitude lost in the turn. We are currently encouraging pilots to become part of this project by measuring the flight characteristics of their plane and sharing their data with the flying community (identity of the pilots will not be shared).

Takeoff Advisor :: Inflight Metrics

Actions (Take-off, Landing, Arming, etc) The Action class is used for commanding the vehicle to arm, takeoff, land, return home and land, disarm, kill and transition between VTOL modes.. Most of the methods have both synchronous and asynchronous versions. The methods send commands to a vehicle, and return/complete with the vehicle's response.

Actions - Take Off, Arm, ... - MAVSDK Guide

So landing aircraft can be a minute apart, or less. If an aircraft taking off turns right or left immediately after takeoff, and the aircraft behind it is going to continue straight ahead for the first few miles in the air, then the controller can clear the second one to take off less than a minute after the first one. The US rules are on pag

A similarly scary landing is seen in the small plane landing of the LET L-410 Turbolet at Rtishchevo. The rare footage depicts the tiny aircraft bouncing along the runway, before skidding to a ...

The most terrifying landings and take-offs you'll ever see ...

In general, the take-off ramp should be about 3 feet (0.91 m) shorter than the landing, and the base of the landing ramp should be at least twice as wide and long as that of the take-off ramp. For example, you might want to build a take-off ramp 5 ft (1.5 m) high, 5 ft (1.5 m) long, and 5 ft (1.5 m) wide.

Home The Electric VTOL News™ highlights the incredible promise and progress of all-electric and hybrid-electric powered vertical takeoff and landing (eVTOL) aircraft, primarily focused on non-helicopter VTOL aircraft large enough to carry passengers without conventional helicopter flight controls (though eRotorcraft are also included).

Home [evtol.news]

Landing is the last part of a flight, where a flying aircraft or spacecraft (or animals) returns to the ground.When the flying object returns to water, the process is called alighting, although it is commonly called "landing" and "touchdown" as well.A normal aircraft flight would include several parts of flight including taxi, takeoff, climb, cruise, descent and landing.

Takeoff and landing - Wikipedia

Consult the POH for the recommended take-off speed. In the event that the POH does not specify a speed, the takeoff should be achieved at or above V MC. After the takeoff, accelerate the aeroplane to the best rate of climb speed (V Y) as quickly as possible, and climb at V Y until a safe manoeuvring altitude is reached.
